Manuscript metrics. Abstract 211 words (structured: Background, Objective, Methods, Results, Conclusion); main text approximately 2,915 words excluding the abstract, tables, figure captions and references; 4 figures; 4 tables; 26 references; 29 manuscript pages; supplementary appendix 25 pages (Tables S1–S17 and Figures S1–S7, including the CHEERS 2022 checklist).

Keywords. cost-effectiveness analysis, intismeran, mRNA-4157, V940, melanoma, pembrolizumab, Keytruda, individualized neoantigen therapy, partitioned survival model.

Declarations

Funding. This study was conducted without external funding.

Competing interests. The author declares no competing interests relevant to this study.

Ethics approval. Not required: this is a model-based economic evaluation using previously published aggregate trial and literature data; no human participants, human tissue or identifiable personal data were involved.

Consent to participate / for publication. Not applicable.

Data availability. All data used in this analysis are derived from published sources cited in the references. The full model-selection results (15,625 distribution combinations) and all model outputs are available in the project repository at <https://github.com/yichao2022/cea-intismeran>, including output/survival_combos_15625.csv and output/canonical_results.json.

Code availability. The partitioned survival model was implemented in Python 3.12 and is available at <https://github.com/yichao2022/cea-intismeran> (tag v1.0-submission). Running `python3 results_pipeline.py` reproduces every reported quantity (base case, decomposition, scenarios, one-way deterministic sensitivity analysis, price ladder and analytic threshold prices) from a single canonical model implementation, with algebraic consistency checks enforced before export; adding `--psa` reproduces the probabilistic analysis.

Author contributions. Yichao Jin conceived and designed the study, developed the model, conducted the analysis, and wrote the manuscript.

Acknowledgments. None.

Reporting standard. This study adheres to the Consolidated Health Economic Evaluation Reporting Standards 2022 (CHEERS 2022; Husereau et al., *Value in Health* 2022); the completed checklist is provided in the supplementary appendix.
